

Made from *Minerals*, not *Fillers*.

Rod's Blocks are condensed, mineral-rich supplements designed for Southern Australian conditions. Unlike traditional blocks that rely on up to 50% molasses and salt as fillers, our blocks are packed with the essential nutrients your livestock actually need.

Why Choose Rod's Blocks?

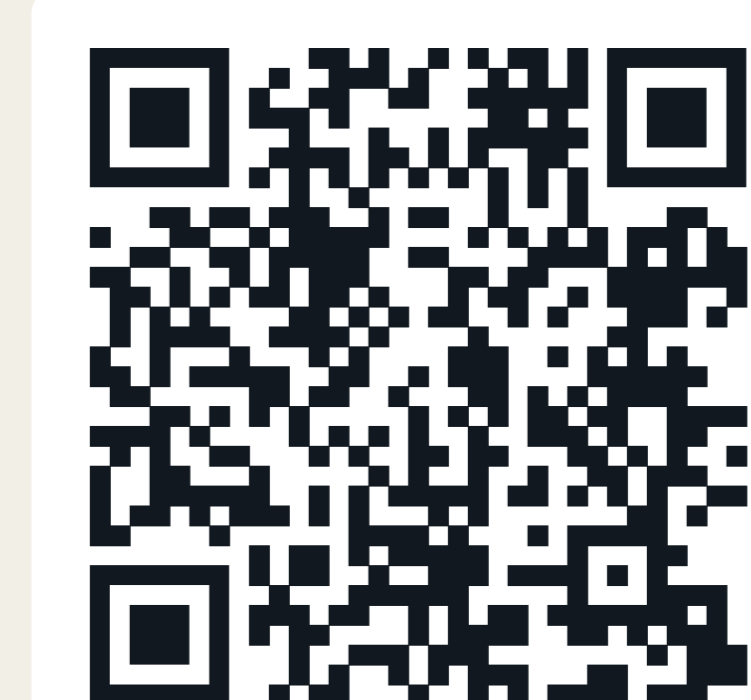

- High Mineral Content:** We don't use fillers like molasses or salt to bulk up the product.
- Correct Ca:Mg Ratios:** Specifically formulated Calcium-to-Magnesium ratios to support metabolic function, bone development, and milk production.
- Eco-Friendly Packaging:** Delivered in non-structural, biodegradable cardboard that is safe for livestock to consume or decompose in the paddock.
- Proven Palatability:** Field-tested to ensure consistent intake without waste.

FEED TYPE	BLOCKS	COMMON APPLICATION
DRY/FIBROUS	DRY FEED	Suitable for all classes of livestock, on low protein dry feed.
	DRY FEED TRACE	Suitable for livestock in trace mineral deficient areas on low quality dry feed.
GREEN	EWE AND LAMB	Formulated for sheep in late pregnancy and lactation.
	BEEF MAG	Formulated for cattle in late pregnancy and Lactation, to aid in Grass Tetany and Milk Fever Prevention.
VARIOUS	TRACE	Suitable to be used all year round in trace mineral deficient areas.

*All of the above products are safe to be fed to both sheep and cattle of various classes.
